

NEW Accessories improve cleat performance

These accessories expand the capability of a conventional Clamcleat® rope cleat while retaining the advantage of not having any moving parts to jam or seize up.

The most innovative accessory is the Keeper (patent pending). This has been designed to overcome the problem of lines being cleated accidentally as well as improving the performance of cleats by holding lightly-loaded lines in the jaws of a cleat.

Tapered Pad allows correct rope/cleating alignment.

Cleat can be mounted either way round.

Pads can be stacked to increase angle or create a riser block.

Backplate provides under-deck support when bolting through thin sections and is supplied with every tapered pad.

Keeper automatically prevents unwanted cleating.

Lead-in allows easy cleating.

Holds rope in teeth under no load or when mounted upside down.

Drainage slots.

Mount on flat or curved surface.

Tested for thousands of cycles under harsh conditions.

Pull rope back and down to cleat

Lift up to release

Two full ranges

Cage allows easy cleating at extreme angles

Wear resistant stainless steel

Rope runs free - Keeper keeps rope out of teeth

Pull rope down to cleat. Sloping rear automatically guides rope into teeth

Rope held securely, even if cleat is mounted under a surface.
